

Program Sunday

Vänligen notera att samtliga föreläsningar kräver en dagsbiljett, och att några av dem behöver en specifik biljett utöver dagsbiljetten. Några av föreläsningarna infaller samtidigt så planera din dag noga. Det är ett begränsat antal biljetter till vissa av föreläsningarna så se till att säkra dina biljetter innan de tar slut! Vi kommer öppna biljettförsäljningen 25:e april.

Please note that all the lectures require a day ticket, and some of them needs a specific ticket as well. Some of the lectures are in the same time so make sure you plan your day. There are a limited amount of tickets to some of the lectures so get your tickets fast! We will start selling the tickets April 25th.

"Managing hoof wall defects... Let's look at the cause"

This presentation looks at hoof wall defects (quarter cracks/toe cracks) and their causes. These hoof wall defects are surrounded by theoretical assumptions as to why they occur. An overload on a section of the hoof wall overtime leads to a hoof capsule distortion. When the load on a section of the hoof wall exceeds the hoof capsule's capacity to accept excessive load...a hoof defect can and often does occur. Successful treatment of hoof wall defects depends on a thorough understanding of the anatomy, biomechanics, how the defect occurs and the appropriate farriery.

Föreläsare/lecturer: Steve O'Grady

Tid/time: 9:00-10:30

Plats/place: Stora ridhuset/Main Indoor

Biljett som behövs/tickets required: dagsbiljett/dayticket

" The meaning of the "thoracic sling", core stability and training for prevention of orthopedic injuries and rehabilitation"

This lecture will give some explanations, why horses suffer from degenerative disorders or fatigue-related injuries at structures of the distal limb that frequently. Shock absorbing structures of the forelimbs will be described in a practical context. Ina addition, the adaption of tissue properties to mechanical stimulus and overload will be topic of this lecture. These information are the basis to understand the anatomy and function of the "thoracic sling" and its meaning in the rehabilitation of the orthopedic patient and the prevention of disorders related to the distal limb. Therefore, current scientific insights will be discussed in the context of practical case reports.

Föreläsare/lecturer: Jenny Hagen

Tid/time: 9:00-10:30

Plats/place: Aulan

Biljett som behövs/tickets required: dagsbiljett och en specifik biljett/dayticket and a specific ticket

"Sjukgymnastik och hovslageri"

Här får ni åter ta del av legitimerad fysioterapeut Johanna Wahlunds kunskap!

This lecture will be held in Swedish

Föreläsare/lecturer: Johanna Wahlund

Tid/time: 9:00-10:30

Plats/place: Smedjan/The Shoeing Hall

Biljett som behövs/tickets required: dagsbiljett/dayticket

"Hovslagarnas mentala arbetsmiljö"

Många hovslagare slutar i förtid på grund av hård press, både fysisk och mentalt. Denna föreläsning kommer fokusera på den mentala biten när det kommer till kundrelationer, hantering av press och strävan efter att alltid göra sitt bästa trots att man inte alltid arbetar utifrån de enklaste förutsättningarna.

Mer information om denna spännande föreläsning om hovslagarnas mentala hälsa utifrån en psykologs perspektiv kommer presenteras 10:e april.

This lecture will be held in Swedish

Föreläsare/lecturer: Presenteras 10:e april

Tid/time: 11:00-12:30

Plats/place: Stora ridhuset/Main Indoor

Biljett som behövs/tickets required: dagsbiljett/dayticket

"Hovvård för hästägare"

Här får du som hästägare ta del av Flyinges Tommy Svenssons stora erfarenhet av att ta hand om hästarnas hovar på bästa sätt. Alla hästar förtjänar bästa tänkbara hovvård, oavsett om det är en skogsmulle eller tävlingshäst på högsta nivå.

This lecture will be held in Swedish.

Föreläsare/lecturer: Tommy Svensson

Tid/time: 11:00-12:30

Plats/place: Aulan

Biljett som behövs/tickets required: dagsbiljett/dayticket

"The Arch of the Equine foot"

The sole functions as an arch structure, yet it encompasses various arch types, resulting in a highly intricate configuration when an arch is applied. The arch of the sole supports the skeletal weight, making it susceptible to the pressure of body weight.

The sole's structure comprises diverse arch configurations. The shifting of skeletal weight may displace the P3 bone within the capsule, resulting in various sections of the arch collapsing.

The arch serves several purposes, including safeguarding sensitive tissue, generating traction based on its type, distributing weight to support internal structures, but paramount among these is its role in housing sensory nerves.

Having the capability to identify a collapsed arch proves immensely advantageous in diagnosing internal pathologies. Given the complexity of the arch structure, a distinct mindset is necessary for enhancing the health and well-being of the horse.

Föreläsare/lecturer: Michael Savoldi

Tid/time: 11:00-12:30

Plats/place: Smedjan/The Shoeing Hall

Biljett som behövs/tickets required: dagsbiljett och en specifik biljett/dayticket and a specific ticket

"Experiences"

This is a unique opportunity to take part of the experiences and anecdotes from Ben Bensons profession as a farrier on top level. Ben Benson has been working in the industry for 23 years and shoed at three Olympic Games.

Föreläsare/lecturer: Ben Benson

Tid/time: 14:00-15:30

Plats/place: Stora ridhuset/Main Indoor

Biljett som behövs/tickets required: dagsbiljett/dayticket
